

PROPRIETARY & PRIVILEGED

CHANDAH SPACE TECHNOLOGIES

We Complete The Picture

Corporate Overview

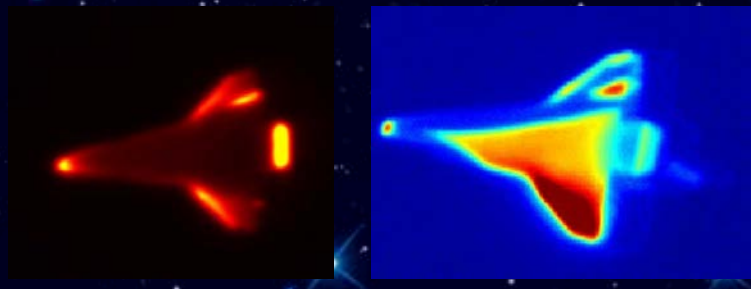

November 8, 2018

Chandah Space Technologies Summary

- CST is establishing a constellation of small satellites in space that can remotely image, video, and communicate with other satellites.
 - This in-orbit inspection capability is not commercially available today, and has the potential to transform health management and operations of high-value space assets (such as communications satellites that are globally valued at +\$100 billion). Access to real time video of maneuvers and pixel level analytics will enable satellite fleet owners to substantially reduce satellite downtime and cost incurred from anomalies.
- Chandah will provide high-resolution images, real-time video, and thermal map of customer's satellites.
- Chandah's target customers are satellite operators (400 satellites in GEO), hardware designers (producing ~20 GEO satellites each year), and risk underwriters.
